Mats

Send us a drawing (in .eps format) and the quantity you'd like us to quote. Desco will provide you a sample at no charge.

Many ESD workbenches have posts or junction boxes that require making cutouts to cover the entire work surface. Our custom mat cutting capabilities allow us to meet this and most other custom mat needs.

What's needed to optimize your application?

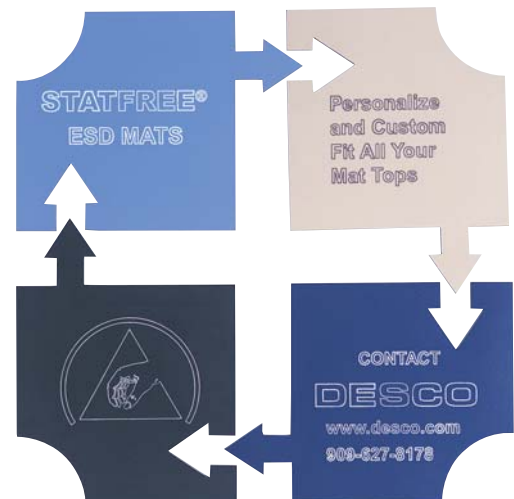

Cut Mat Shape for Your Application

Our automated mat cutter can cut with accuracy and repeatability to within thousandths of an inch. In addition to being able to cut all our mats, it can cut virtually any material, including fiberglass, carbon fiber, nylon, mylar, neoprene, kevlar, nomex, foam, mesh, canvas, and tubular knit. There are few limitations to the capabilities of our automated mat cutter. We can accommodate just about any pattern you desire.

Customized Marking on Your Mats

Our Laser Engraver makes available the production of a countless number of character symbols, and private label branding. We can easily put your logo, address, or other information on any of our mats. The laser creates permanent markings that do not easily rub, wash, or abrade off. Laser etching is more durable than offset/silk screen printing and the end result is markings that are UV/weather and chemical resistant. Custom marks on products, such as ID number, bar coding, and date coding are also possible.

Statshield® Smocks

Get Company Name Patches for Your Smocks

Outfitting a work force in ESD smocks is the single most powerful step to demonstrate a company's commitment to their ESD control program. ESD smocks creates Faraday Cage Effect. Charges on workers clothing are shielding, protecting your ESD sensitive products. Statshield® ESD Smock Patented* hip-to-cuff grounding with conductive knitted cuff eliminates the need for a wristband. With coil cord snapped to the hip of the smock provides hand-free grounding and increased productivity.
